SUMMARY/OBJECTIVE

The things I'm most passionate about are web design, software development, and coding. Over the last couple of years, I have worked with react.js, javascript, and typescript. My experience with JavaScript and React has allowed me to deliver excellent results in numerous complex apps. As an added bonus, I have been using Flutter for more than a year now. There is always something new I want to learn and I love finding new ways to accomplish tasks.

PROJECTS

TrackFox Landing page

Landing page of Track fox. Built using next js & chakra ui

Trending games

A simple app to show trending games from the rawg API and also to search for games and get their details.

React .Net chat application

An anonymous group chat application using signalr.

Pokedex

The NEXT JS app displays pokemon from the POKE_API and displays their details

Pokedex Flutter app

The Flutter app displays pokemon from the POKE_API and displays their details

Portfolio site

My portfolio website. It is built using Next.js and MDX.

Bangla sentiment analysis

A ML based web app that uses django rest api to call a ML model to determine the sentiment of Bangla text.

The blog

A full-stack blog using NEXT JS and NODE JS backend. Built this for my database course at the University.

WORK EXPERIENCE

Freelance front-end web developer

--- Fiverr.com / other
